## II B.Tech - I Semester - Regular / Supplementary Examinations DECEMBER 2022

# BASIC THERMODYNAMICS <br> (MECHANICAL ENGINEERING) 

## Duration: 3 hours

Max. Marks: 70
Note: 1. This paper contains questions from 5 units of Syllabus. Each unit carries 14 marks and have an internal choice of Questions.
2. All parts of Question must be answered in one place.

BL - Blooms Level
CO - Course Outcome

|  |  |  | BL | CO | Max. <br> Marks |
| :---: | :---: | :---: | :---: | :---: | :---: |
| UNIT-I |  |  |  |  |  |
| 1 | a) | Explain Zeroth law of thermodynamics. What is its importance? | L2 | CO1 | 5 M |
|  | b) | A gas undergoes a thermodynamic cycle consisting of the following processes: <br> I) Process1-2: Constant pressure $\mathrm{P}_{1}=1.4 \mathrm{bar}$, $\mathrm{V}_{1}=0.028 \mathrm{~m}^{3}, \mathrm{~W}_{12}=10.5 \mathrm{~kJ}$ <br> II) Process2-3: Compression with $\mathrm{PV}=$ constant, $\mathrm{U}_{3}=\mathrm{U}_{2}$ <br> III) Process3-1: Constant volume, $\mathrm{U}_{1}-\mathrm{U}_{3}=-26.4 \mathrm{~kJ}$. Assume there are no significant changes in Kinetic energy (KE) and Potential Energy (PE). Determine the following: <br> i) Calculate the network for the cycle in kJ , <br> ii)Calculate the heat transfer for process 1-2, <br> iii) Show that cycle having $\sum \mathrm{Q}=\sum \mathrm{W}$. | L3 | CO1 | 9 M |
| OR |  |  |  |  |  |
| 2 | a) | Obtain an expression for work and heat transfer for a Polytropic process and analyze the relationship between them. | L2 | CO1 | 5 M |
|  | b) | 12.60 liters of a gas at $20^{\circ} \mathrm{C}$ and 1.03 bar is compressed adiabatically to 9.8 bar. It is then cooled at constant volume to pressure $\mathrm{P}_{3}$ and further expanded isothermally so as to reach the initial condition. Find | L3 | CO1 | 9 M |

|  |  | i. the value of pressure $\mathrm{P}_{3}$ <br> ii. the work done and <br> iii. the change in internal energy in constant volume process. <br> Assume $C_{p}=14.28 \mathrm{~kJ} / \mathrm{kg} \mathrm{K}$ and $C_{\nu}=10.13 \mathrm{~kJ} / \mathrm{kg} \mathrm{K}$. |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| UNIT-II |  |  |  |  |  |
| 3 | a) | Establish and analyze the equivalence of KelvinPlanck and Clausius statements. | L3 | CO 2 | 5 M |
|  | b) | A nozzle is a device for increasing the velocity of a steadily flowing of fluid. At the inlet to a certain nozzle the enthalpy of the fluid is $3025 \mathrm{~kJ} / \mathrm{kg}$ and the velocity is $60 \mathrm{~m} / \mathrm{s}$. At the exit from the nozzle the enthalpy is $2790 \mathrm{~kJ} / \mathrm{kg}$. the nozzle is horizontal and there is negligible heat loss from it. Determine the following: <br> i) The velocity at the nozzle exit, <br> ii) If the inlet area is $0.1 \mathrm{~m}^{2}$ and specific volume at inlet is $0.19 \mathrm{~m}^{3} / \mathrm{kg}$, find the rate of flow of fluid, and iii) If the specific volume at the nozzle exit is 0.5 $\mathrm{m}^{3} / \mathrm{kg}$, find the exit area of the nozzle. | L3 | CO 2 | 9 M |
| OR |  |  |  |  |  |
| 4 | a) | What is an irreversible process? Discuss the types of irreversibility and also mention the causes of irreversibility of a process. | L2 | CO2 | 5 M |
|  | b) | A gas flows steadily through a rotary compressor. The gas enters the compressor at a temperature of $16^{\circ} \mathrm{C}$, a pressure of 100 kPa , and an enthalpy of $391.2 \mathrm{~kJ} / \mathrm{kg}$. The gas leaves the compressor at a temperature of $245^{\circ} \mathrm{C}$, a pressure of 0.6 MPa , and an enthalpy of $534.5 \mathrm{~kJ} / \mathrm{kg}$. There is no heat transfer to or from the gas as it flows through the compressor. <br> i) Evaluate the external work done per unit mass of gas assuming the gas velocities at entry and exit to be negligible. <br> ii) Evaluate the external work done per unit mass of gas when the gas velocity at entry is $80 \mathrm{~m} / \mathrm{s}$ and that at exit is $160 \mathrm{~m} / \mathrm{s}$. <br> iii) Analyze above two results of rotary compressor with your comment. | L3 | CO2 | 9 M |

## UNIT-III

| UNIT-III |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 5 | a) | Show that entropy is the property of a system. | L2 | CO3 | 5 M |
|  | b) | A reversible heat engine operates between two reservoirs at a temperature of $600^{\circ} \mathrm{C}$ and $40^{\circ} \mathrm{C}$. The engine drives a reversible refrigerator which operates between $40^{\circ} \mathrm{C}$ and $-20^{\circ} \mathrm{C}$. The heat transfer to the heat engine is 2000 kJ and the network output of the combined engine refrigerator plant is 360 kJ . Evaluate the following: <br> i) Sketch the neat diagram of combined engine refrigerator plant with the given data, <br> ii) The heat transfer to the refrigerator, and <br> iii) The net heat transfer to the reservoir at $40^{\circ} \mathrm{C}$ | L3 | CO3 | 9 M |
| OR |  |  |  |  |  |
| 6 | a) | Define heat engine, heat pump and refrigerator and establish relationship between C.O.P of heat pump and refrigerator. | L2 | CO3 | 5 M |
|  | b) | Calculate the entropy change of the universe as a result of the following processes: <br> i) A copper block of 600 g mass and with $C_{p}$ of 150 $\mathrm{J} / \mathrm{K}$ at $100^{\circ} \mathrm{C}$ is placed in a lake at $8^{\circ} \mathrm{C}$. <br> ii) The same block, at $8^{\circ} \mathrm{C}$, is dropped from a height of 100 m into the lake. <br> iii) Two such blocks, at 100 and $0^{\circ} \mathrm{C}$, are joined together. | L3 | CO3 | 9 M |
| UNIT-IV |  |  |  |  |  |
| 7 | a) | With neat schematic diagram, develop an expression for maximum work done by a closed system with flowing into the system $\left(\mathrm{T}_{0}>\mathrm{T}\right)$. | L4 | CO4 | 4 M |
|  | b) | Air flows through an adiabatic compressor at $2 \mathrm{~kg} / \mathrm{s}$. The inlet conditions are 1 bar and 310 K and the exit conditions are 7 bar and 560 K . Compute the net rate of availability transfer and the irreversibility. Take $\mathrm{T}_{0}=298 \mathrm{~K}$. | L3 | CO4 | 10 M |
| OR |  |  |  |  |  |
| 8 | a) | A house husband is cooking mutton for his family in a pan that is: i) uncovered, ii) covered with a light lid, iii) covered with a heavy lid. For which case will the cooking time be the shortest? Why? | L4 | CO4 | 4 M |

|  | b) | 2 kg of steam at a pressure of 20bar exists in the following cases: <br> i) wet steam with a dryness fraction of 0.9 <br> ii) superheated to $250^{\circ} \mathrm{C}$. <br> Determine enthalpy, volume, entropy and internal energy. <br> (Note: Take $\mathrm{C}_{\mathrm{p}}=2.302 \mathrm{~kJ} / \mathrm{kgK}$ for super-heated steam) | L3 | CO 4 | 10 M |
| :---: | :---: | :---: | :---: | :---: | :---: |
| UNIT-V |  |  |  |  |  |
| 9 | a) | Discuss and draw the neat diagrams for the following cycle: <br> i) Atkinson cycle; <br> ii) Brayton cycle, and <br> iii) Lenoir cycle. | L2 | CO5 | 6 M |
|  | b) | An engine working an Otto cycle is supplied with an air at $0.1 \mathrm{MPa}, 35^{\circ} \mathrm{C}$. the compression ratio 8 . Heat supplied is $2100 \mathrm{~kJ} / \mathrm{kg}$. Calculate the following: <br> i) The maximum pressure of the cycle, <br> ii) The maximum temperature of the cycle, <br> iii) The cycle efficiency, and <br> iv) The mean effective pressure. <br> (Note: for air, $C_{p}=1.005 \mathrm{~kJ} / \mathrm{kg} \mathrm{K}, C_{v}=0.718 \mathrm{~kJ} / \mathrm{kg} \mathrm{K}$ and $R=0.287 \mathrm{~kJ} / \mathrm{kg} \mathrm{K}$ ) | L3 | CO5 | 8 M |
| OR |  |  |  |  |  |
| 10 | a) | Compare the Otto cycle, diesel cycle and dual combustion cycle for the following cases: <br> (i) same compression ratio, <br> (ii) maximum pressure and temperature. | L2 | CO5 | 6 M |
|  | b) | In an air standard Diesel engine cycle, the compression ratio is 16 , and at the beginning of isentropic compression, the temperature is $15^{\circ} \mathrm{C}$ and the pressure is 0.1 MPa . Heat is added until the temperature at the end of the constant pressure process is $1480^{\circ} \mathrm{C}$. Calculate the following: <br> i) The cut-off ratio, <br> ii) The heat supplied per kg of air, <br> iii) The cycle efficiency, and <br> iv) The mean effective pressure. | L3 | CO5 | 8 M |
