IV B.Tech - I Semester - Regular Examinations - October - 2017

## DESIGN AND DRAWING OF HYDRAULIC STRUCTURES (CIVIL ENGINEERING)

Duration: 3 hours
Max. Marks: 70

Answer any one Full question.
$1 \times 70=70 \mathrm{M}$
Note: Assume any other data if required. Khosla's curves and Blench curves are followed.

1. Design and draw a surplus weir for the following data: Combined catchment area $=51 \mathrm{~km}^{2}$; Intercepted catchment are $=46 \mathrm{~km}^{2}$; Top bund level(TBL)=100.00; Maximum water level(MWL)=98.50m; Full Tank Level(FTL)=97.5m; Average ground level at proposed site $=96.5 \mathrm{~m}$; Top width of tank bund $=2 \mathrm{~m}$; Side slopes of bund on either side $=2: 1$; Level of hard strata for foundation $=95.00 \mathrm{~m}$; The ground level below the weir ( $\mathrm{D} / \mathrm{S}$ of weir) slopes to a level of 95.50 m in a distance of about 6 m .
Ryve's coefficient $\mathrm{C}=8$; Modified Ryve's coefficient $\mathrm{C}=2.5$
Provisions may be made to make Kutcha regulating arrangements to store water up to MWL in terms of necessity.

OR
2. Design and draw a canal regulator for the following data:

| Particulars | $\mathrm{U} / \mathrm{S}$ | $\mathrm{D} / \mathrm{S}$ |
| :--- | :--- | :--- |
| Full Supply Discharge | $18.0 \mathrm{~m}^{3} / \mathrm{s}$ | $15.0 \mathrm{~m}^{3} / \mathrm{s}$ |
| Bed width | 12 m | 12 m |
| Full Supply Level | +12.0 m | +12.0 m |
| Top Bank Level | +13.0 m | +13.0 m |
| Bed Level | +10.0 m | +10.0 m |
| Top width of bank | 2.0 m | 2.0 m |
| Side Slopes | $2: 1$ | $2: 1$ |

Bligh's coefficient $\mathrm{C}=10$
General ground level at the site +12.0 m
Good soil for foundation is available at +9.0 m
Splayed wing walls are to be provided
Design the vent ways, Gates, Apron \& protection works.
